

Threaded-Body Cylinder

single acting with spring return and wiper
max. operating pressure 160 / 500 bar

Description

These threaded-body cylinders allow direct tube or hose connection.

Due to elimination of the pipe union a particularly compact assembly results. Depending on wall strength and fixing method (thread or bore) a certain adjustment is possible.

The cylinders can also be screwed into threaded bores. Sealing is then effected by the sealing nut available as accessory. By adjustment, workpiece tolerances of more than 20 mm can be absorbed.

Material

Piston material: casehardening steel, hardened
Cylinder body: free-cutting steel

Important notes

Threaded-body cylinders must not be subjected to a load in retracted position.

The cylinder is not suitable for pre-mounting of the cutting ring, since there is no stop for the tube. This pre-assembly has to be made by means of a male connector D8S (9208-102).

Cylinders have to be protected against direct influences of aggressive cutting lubricants and coolants.

Operating conditions, tolerances and other data see data sheet A 0.100.
