

Block Cylinder

with aluminium housing for adjustable magnetic sensors,
double acting, max. operating pressure 350 bar

Oil supply

Versions with pipe thread
see page 2

Manifold mounting with O-ring sealing
see page 3

Application

Double-acting block cylinders with position monitoring are particularly suitable for automated installations, time and cycle-dependent clamping and unclamping.

Description

The position monitoring supplies the required information about the position of the piston. Monitoring is made by electronic sensors which detect the magnetic field of the magnetic piston. The switching points can be continuously adjusted by displacement of the switches in the slots.

Advantages

- Compact design
- Easy adjustment of switching point positions
- Same dimensions as the block cylinders as per data sheet B 1.5094, except for total length.
- Diverse mounting possibilities
- 3 standard stroke lengths

Throttling of the flow rate

Throttling has to be made in the oil supply line to the block cylinder to rule out a possible pressure intensification and thereby pressures over 350 bar. The hydraulic circuit diagram shows flow control valves which allow oil return from the block cylinder without any impediments.

Important notes

Please only use fittings with soft seals, see page 4.

Block cylinders with aluminium housing are **not suitable for operation of blanking and punching dies.** Uncontrollable spikes and vibrations can appear which especially in the case of aluminium could cause a decrease in tool life.

Steel can influence the magnetic field of the magnetic piston and thereby the position of the switching points. If there is the same influence for each stroke (e.g. because of adjoining steel components) it can be compensated by displacing the magnetic sensors. But if the influence differs from stroke to stroke, as e.g. in the case of swarf, a cover has to be provided 30 mm over the magnetic sensors.

Covers have to be provided to protect the cylinders against ferritic swarf.

Piston material: case-hardening steel, hardened
Cylinder body material: anodized aluminium alloy

Corrosion-resistant version is available on request

For part-nos. see page 2 bottom

Max. cylinder temperature see page 4

Operating conditions, tolerances and other data see data sheet A 0.100.

Fixing possibilities

Application example of mould construction

Variants available:
 ◆ Shorter stroke
 ◆ Keyway
 ◆ Internal thread instead of mounting holes in the body
 Corrosion-resistant version available

Versions with pipe thread

Cylinders must be backed up for operating pressures exceeding 160 bar.

Other dimensions see page 2.

Order:

Please add the identification letters **K, L, S, or B** to the Part no. of the required block cylinder.

Example of ordering:

Double-acting block cylinder 1545-513 with oil supply at the broad side
Part no. 1545-513 K

Accessory: Magnetic sensors

Compared with traditional reed switches the electronic magnetic sensors offer the following advantages:

- Indifference to shock and vibration
- Bounce-free output signal
- Only one switching point
- Wear resistant
- Protection against reverse battery
- Protected against short circuits

Electric connection is made as per traditional inductive proximity switches; up to four magnetic sensors can be connected in series.

Minimum distance of the switching points: 6 mm.

For further information about voltage supply for position controls see data sheet G 2.410.
